## Configure Outlook and Others

Posted by ESLPAL - 2007/12/05 20:09

---

Here are the things that I had trouble with and the answers I found.

1. Set up an IMAP account not a POP, the imap is much better integrated.
2. you must select an SSL conection.
3. IMPAM (Incoming) Server is: imap.gmail.com
4. SMTP (outgoing) Server is: smtp.gmail.com
5. user name is: YOURUSERNAME@espal.com
6. Password is: YOURPASSWORD (the one you chose after loging in for the first time).

Any questions please post them here.

Good luck

Bill

PS. dont forget your start page, now has direct live access to your espal.com email, hotmail.com and yahoo.com. also check your SKYPE, and other IM providers all on one page!

[START PAGE](#) | [DOCS](#) | [MAIL](#) | [CALENDAR](#) | [GHOME](#) | [HOME](#) | [ARTICLES](#) | [JOBS](#)

[GOOGLE](#) [GMAIL](#) [HELP](#)
